

Handsfree

The Handsfree Transporter is a very effective tool that allows operators to ride instead of run

Handsfree Transporter

Handsfree Transporter is an add-on/modification that provides for safe and easy "look-ma-no-hands" operation of any Segway®. The Handsfree Transporter frees up the operators hands for camera operation, making it ideal for use by Steadicam™ operators.

Used alone, the Handsfree Transporter is a very effective tool that allows operators to ride instead of run. When a Handsfree Transporter is used with a Klassen HT Hardmount the cameras weight is transferred to the stabilized platform, making the operators job easier on the body.

Even handheld operators can safely use the Handsfree Transporter if used in conjunction with the Klassen HT Hardmount and Suspender.

The Handsfree Transporter is very intuitive to use – simply leaning forward or backward controls fore-and-aft motion, while turning is controlled by foot pedals. The gyro-stabilized platform ensures a safe and stable platform.

The Handsfree Transporter is capable of speeds of 21 km/hr and is powered by rechargeable Li-ion battery. The XT version (off-road) can travel 15 km on a single charge, while the HT version can traverse up to 35 km. The load capacity is 105 kg.

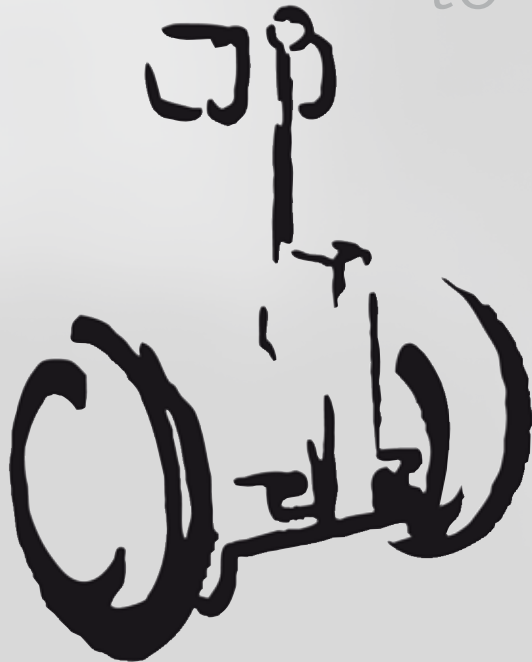

We are pleased to be authorized dealers of Handsfree Transporter and have units available for purchase or rent.

Handsfree May 2006

Part no.	Description
